POST CARE PRP HAIR LOSS INJECTIONS

PRP will cause an increase in the density of hair but will not increase in thickness of hair. We highly recommend pairing these treatments with our medical grade Hair kit or prescription strength hair solutions, along with Nutrafol hair supplements.

1. You may experience some mild soreness and swelling to the scalp for a few days.
 2. You may wash your hair **48 hours after** your PRP treatment.
 3. You may wear clean hats immediately after your PRP treatment.
 4. You may have your hair colored **7 days** after your PRP treatment
5. You will start noticing increased hair growth in 6-8 weeks and maximum results 4-6 months from the procedure.
6. One full treatment consists of 3 PRP injection appointments spaced at least 1 month apart.

*Maintenance treatments are recommended every 3 to 6 months after your series of three.
