

BodyTone

Body Tone renders incredible muscle mass enhancement, It does this through “Muscle Confusion” technology which includes 20,000 muscle contractions in 30 minutes using three proprietary waveform patterns of bio-electric pulses. The treatment is not painful, in fact, you may find yourself laughing like many of our patients do!

WHY DO WE LOVE BODYTONE?

It's Versatile

Multiple areas of the body can be treated in one session, making the treatment highly effective for muscle sculpting & toning.

Quick Results

Treatments are quick, taking about 30 minutes. They are painless but intense. After a series of treatments, you'll see results within 3-10 weeks.

Rapid Recovery

You may feel mildly sore post-procedure (like a good workout at the gym) for up to 72 hours!

Non-Invasive

BodyTone is a non-invasive procedure that stimulates muscles using patented waveforms to cause muscle confusion and achieve muscle growth and strength.

Great Results

BodyTone delivers powerful results that can be maintained over time for continued muscle strength and definition.

FAQS:

How many treatments are necessary?

Answer: 6 sessions over 3 weeks initially, then maintenance as desired.

When will I see the results?

Answer: In 3-10 weeks, assuming that your BMI is less than 35 and you do not increase your intake of calories relative to normal.

What should I expect during the treatment?

Answer: Muscle contractions that simulate those with a TENS unit. It is not painful. The intensity is adjustable to your tolerance.

What should I expect after the treatment?

Answer: You may have some mild soreness, similar to what you would experience from a good workout at the gym, which will subside within 72 hours.

Is there any downtime?

Answer: No! This is a no-downtime, non-invasive procedure!
