

WHAT IS RADIESSE?

Radiesse is a calcium-based filler that also promotes neo-collagenases to plump and elevate buttocks.

WHAT DOES RADIESSE DO TO YOUR BOOTY?

It is the perfect alternative to invasive surgery. This dermal filler works deep in the dermis to help revitalize collagen for a youthful appearance with natural results, leaving your butt smooth and dimple-free instantly.

WHEN DO YOU SEE THE EFFECTS OF RADIESSE?

Unlike other Booty injectables, the results appear instantly and the results last up to two or more years.

HOW MANY TREATMENTS DO I NEED?

Patients often need 3 Radiesse treatments, scheduled 3-4 months apart.

DOES IT HURT?

There is some mild discomfort during the numbing process but the procedure is tolerable. We do recommend taking Tylenol before arriving at your appointment. Numbing medication will be used to numb the skin and deeper layers of the buttock.

HOW LONG IS RECOVERY?

The typical recovery is 2-5 days with mild to moderate bruising that can occur. Most patients report a 1-2 day recovery.
